Research conducted by "Backwood Turf" 2015-2016

Description
This list primarily focuses on high school football players, but also includes college and professional football players with cancer diagnosed in 2009 or after, due to the fact that synthetic turf fields were not in heavy use at high schools until that year. A few others are included, such as a few older players or football players who got cancer at a very young age, but the cancer came back when they were in high school or shortly after (there is a possibility that synthetic turf may have caused the recurrence of cancer). Also included is a column for whether a player has passed away.

Format:

- Current writing applies to "Played on ST before diagnosis or recurrence"
- Numbers in first column was assigned by this site, then by adding type of cancer, then by age, then most recent year of diagnosis (e.g. "16, Brain Tumors are first, age 14 at diagnosis, in 2015).
- Yellow shading indicates schools researched, yet unknown if field is synthetic turf or grass.
- Orange shading is to organize the columns into groups.

Key:

- C - Grass
- ST - Synthetic Turf
- PF - Playing Fields
- PR - Practice Fields
- IFF - Indoor Practice Facility

Observations:

- 220 football players with cancer
- 13 former with cancer (there are still 22 players whose position I couldn't find)
- 100

• Played on synthetic turf before diagnosis or recurrence of cancer

• 123 football players

• There are players from same school with cancer.
 1 for Memphis
 3 (Mable Creek High (2 boys diagnosed within 1 year of each other)
 3 for Wood High (2 boys diagnosed same year, same age)
 3 (L. Charles Catholic High (2 boys diagnosed within 1 year of each other)
 1 (Bellevue High (2 boys same age, same year).
 • There are other players from the same school, but age gap might be too small, or the high school has grass just unknown if the players were exposed to synthetic turf elsewhere in town or growing up, etc. Plus there are other colleges/HS, some school cancers.
 • There is one boy who has a twin brother who also played football. One twin got cancer, the other one didn't (so far).
 • Other significant information is included under Notes, in columns before Sources.
 • Columns kept unknown (unless specified if player's school has grass field) because he may have played on synthetic turf for another sport, community league, local park synthetic turf, etc. Not everything can be found on the internet, this spreadsheet just focuses on that football experience.

About "Backwood Turf":
